

Foil wrap for Little Joe 6 launched 10/4/59. The material used is Grafix silver metallic film that has to be coated with Minwax polyacrylic water-based clear gloss finish because ink jet printers need an emulsion; otherwise the ink beads up and won't dry on the metallic surface. During development, the ideal drying time was 1.5 hrs in a low-humidity environment. A surface that is still fairly sticky results, so you run this through your ink jet printer at your own risk.
